Dear Ken;

As we discussed yesterday, Baugh's concerned that Ash Grove is not intending to compact the fill you're placing into the pond. Our concern is in regards to the settlement of the 151.010 conveyor vertical take-up, which we are constructing on this filled area.

You informed me that you realize the conveyor take-up may settle if the pond fill isn't properly compacted. You told me that you would shim the equipment to correct it, if any settlement does occurs.

Ken, we're writing so we don't have any misunderstanding in regards to this topic. Please call if you have any questions.

Sincerely,

J. Mark Howell  
Ass't Project Manager
